

Task 9 – GitHub Project Implementation

Step 1: Created the Project Structure

I created and organized the project files as Assignment_5.ipynb, Data.xlsx, README.md, and requirements.txt.

Step 2: Used VS Code

I used VS Code for developing and managing the project. I worked on Assignment_5.ipynb and used Data.xlsx as the dataset.

Step 3: Initialized Git

I initialized Git in the project folder using git init.

Step 4: Checked Git Status

I checked the project status using git status.

Step 5: Added the Project Files

I added all project files to the staging area using git add ..

Step 6: Created the Initial Commit

I created the initial commit using git commit -m "Initial commit".

Step 7: Set the Main Branch

I set the branch name to main using git branch -M main.

Step 8: Connected to GitHub

I connected the local repository to my GitHub repository using git remote add origin <repo_link> and verified the connection using git remote -v.

Step 9: Pushed the Project to GitHub

I pushed the project to the GitHub main branch using git push -u origin main.

Step 10: Maintained Version Control

I maintained version control by using git add ., git commit -m "Updated project", and git push whenever changes were made.

Final Repository Structure: Assignment_5.ipynb, Data.xlsx, README.md, and requirements.txt.
